

Configure screen size

Dontprint guessed the screen size of your e-reader based on the e-reader model you selected during setup. The guessed values should be reasonably close to the exact screen size. So unless you experience any problems, you may just keep the current settings. However, setting the *exact* screen size is also easy: From the Firefox menu, choose *Tools* → *Dontprint* → *Configure Dontprint* and then pick the "Device" tab.

The following pages assist you in finding out the correct screen size.

You will see a number of test strips with very fine (1 pixel) vertical bars. Most of the test strips will either be blurry, contain a few bars that are 2 instead of 1 pixels thick or contain a few bars that are 2 instead of 1 pixels separated from the next. Only a single test strip should be clear and regularly spaced over the whole range. Read off the screen size of your device next to this test strip.
