

Congratulations!

If you are reading this document on your e-reader, then you have configured Dontprint correctly.

Go ahead and try it out:

- Go to the website of a publisher.
- Log in or use your institution's proxy.
- Navigate to an article. A Dontprint icon should appear (see screenshot). Click it!

Dontprint will download the article's PDF, optimize the layout for a small screen, and send it to your e-reader.

Turn page to configure the screen size...

Configure screen size

Dontprint guessed the screen size of your e-reader based on the e-reader model you selected during setup. The guessed values should be reasonably close to the exact screen size. So unless you experience any problems, you may just keep the current settings. However, setting the *exact* screen size is also easy: From the Firefox menu, choose *Tools* → *Dontprint* → *Configure Dontprint* and then pick the "Device" tab.

The following pages assist you in finding out the correct screen size.

You will see a number of test strips with very fine (1 pixel) vertical bars. Most of the test strips will either be blurry, contain a few bars that are 2 instead of 1 pixels thick or contain a few bars that are 2 instead of 1 pixels separated from the next. Only a single test strip should be clear and regularly spaced over the whole range. Read off the screen size of your device next to this test strip.

Did you find your screen width? Great!

Now follow the same procedure for the screen height:

On the following pages, find the only test strip where the 1-pixel bars are clear and regularly spaced over the whole region. Read off the screen height of your device next to that test strip and you're done!

Ready to launch

Did you find out the screen size of your device? To tell Dontprint about the screen size, follow these steps:

1. From the Firefox menu, choose
Tools → *Dontprint* → *Configure Dontprint*.
2. Pick the "Device" tab.
3. Select your e-reader model and enter the screen width and height.
4. If you are confident that you found out the correct width and height, please consider checking the box to to send the values to me.

If you could not find out the screen size then maybe this is the wrong test document for your e-reader model. Follow steps 1 and 2 above, then make sure to select the correct e-reader before you click the button "Help me find out the correct document size". You should then receive the correct test document. If the problem persists, please consider filing a bug report at <https://github.com/robamler/dontprint/issues/new>
